

AdmoreSDKDeepLink 使用说明

说明

1. appId: app在《多点广告开放平台》的唯一ID
2. appKey: 《多点广告开放平台》分配
3. scheme头: 《多点广告开放平台》分配, 比如 `am1234://`, 需要在app的工程文件的 `URL Types` 项里添加: `identifier: admore`, `URL Schemes: am1234`
4. idfa: sdk中使用了idfa, 请在提交appstore审核时注意

使用方法

1. 将AdmoreSDK.h 和 AdmoreSDK.h放入工程,
2. 或者使用Pod安装方式: `pod 'AdmoreSDKDeepLink', :git => 'https://github.com/duodiankeji/deeplink.git'`
3. 中 `application:didFinishLaunchingWithOptions:` 中初始化

```
- (BOOL)application:(UIApplication *)application didFinishLaunchingWithOptions:(NSDictionary *)launchOptions
{
    [AdmoreSDKDeepLink setAppId:@"appId" appKey:@"appkey"];
    ...
}
```

1. 在您的AppDelegate中override `application:openURL:options:` 方法, 调用AdmoreSDK 的 `handleUrl:withAppId:`:

```
- (BOOL) application:(UIApplication *)app openURL:(NSURL *)url options:(NSDictionary<UIApplicationOpenURLOptionsKey,id> *)options {

    if( [AdmoreSDKDeepLink handleUrl:url] ) {
        return YES;
    }
    //处理您的其他逻辑
    return NO;

    //或者直接 return [AdmoreSDKDeepLink handleUrl:url];
}
```

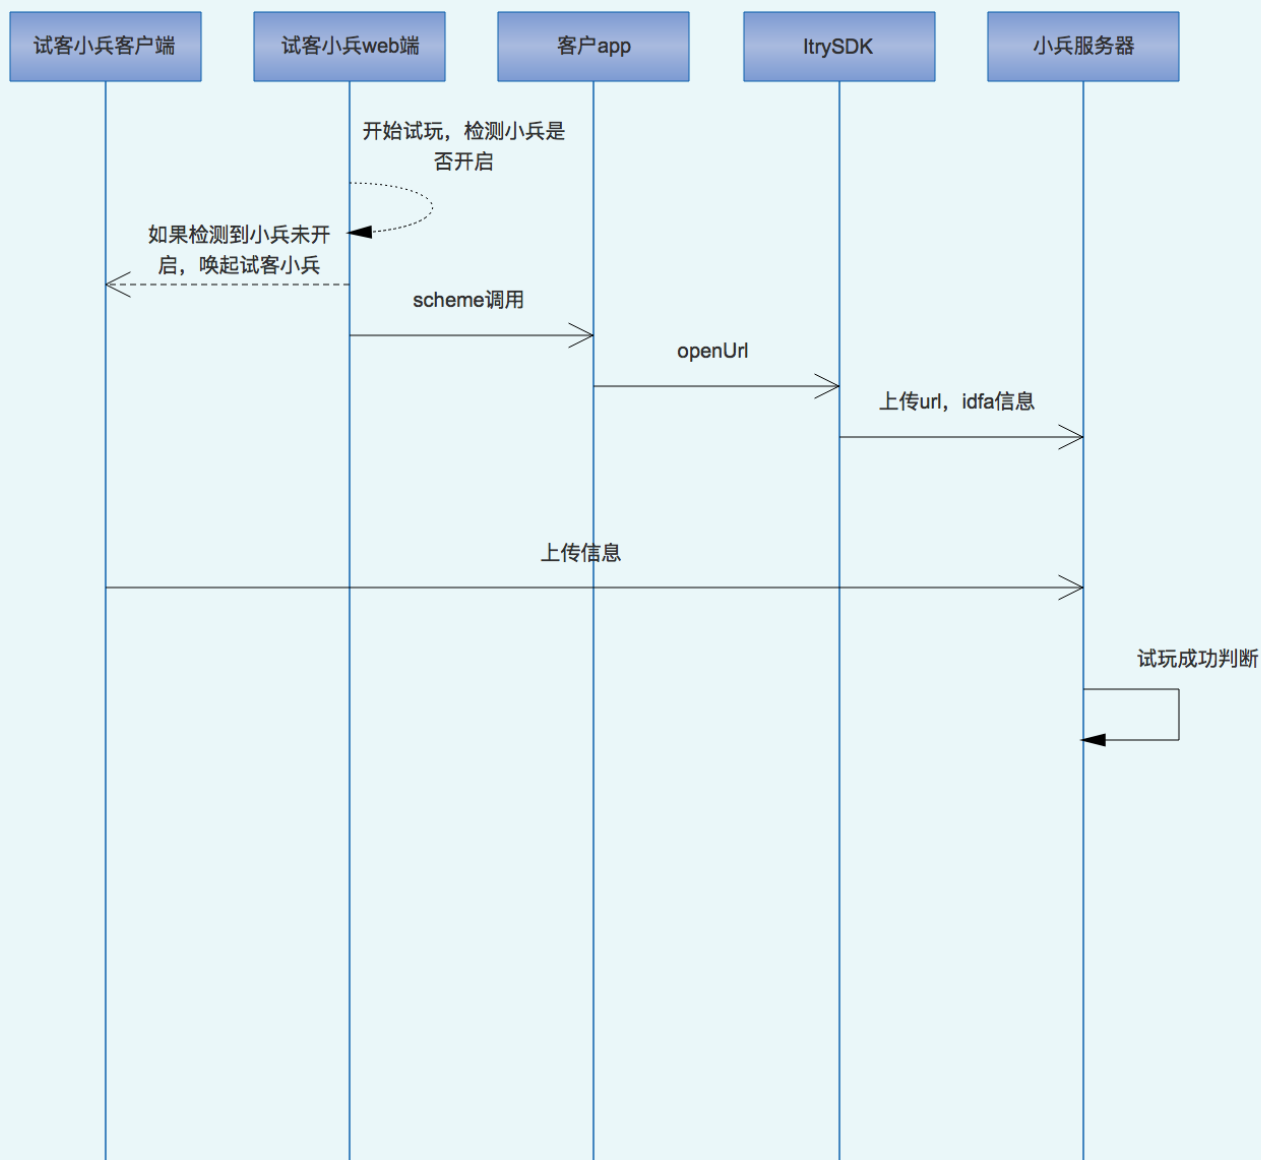

如果您的app只支持ios9(含)以上版本，只需添加以上函数即可。如果需要支持ios9以下，则 `application:handleOpenURL:` 也需要处理

```
- (BOOL)application:(UIApplication *)application handleOpenURL:(NSURL *)url {

    if( [AdmoreSDKDeepLink handleUrl:url] ) {
        return YES;
    }
    //处理您的其他逻辑
    return NO;

    //或者直接 return [AdmoreSDKDeepLink handleUrl:url];
}
```

流程

关于上传接口(地址待定)

1. 使用get方式上传, 形式如下:

```
https://itry.com/admoresdk/info?a=appId&t=uploadtime&i=info
```

示例:

```
https://itry.com/admoresdk/info?a=1234&t=1484116404&i=b01308a20167267e3dceb548c134fbb2f36dbb1c2f6cfeef0eda79a2c4eb1b4253002798993f780ea85221ab4c61cb567d6a4bcb4f3438b484dc32fe41042bf1dd385c44c2de2a151c23ea88c60b70a5f74ecb5a1e13fd2633a35df0c0392e45938ab2290a862b05ab95ed64b8605a77
```

info为json的aes加密后的二进制字符串,

aes key:

字符串: <https://am.admore.com.cn/deeplink/info?ai=appld&ak=appkey&t=uploadtime> 的md5值 (32位)

json:

```
{
  "url" : "am1234:\\\\start?session=12&time=123",
  "idfa" : "F4F9A60C-A5AC-4D26-B168-247A66C34A3D"
}
```
